

## Web Component Development with Servlets & JSPs, Java EE 6

**Duration:** 5 Days

### What you will learn

JavaServer Pages(TM) (JSP(TM) page) technology and servlets are the key web-tier technologies defined in the Java(TM) Platform, Enterprise Edition (Java EE platform). The Web Component Development With Servlet and JSP(TM) Technologies, Java EE6 course provides experienced developers of Java technology applications the knowledge and skills to quickly build web applications suited to any Java EE 6 application server using JSP and servlet technologies. Students are exposed to the current methods for analyzing, designing, developing, and deploying web applications with Java technologies. Lab exercises provide students with experience in constructing and deploying the small-to-medium scale web applications found in intranet and low-volume commercial sites. The course features the Java EE 6 technology, and uses the Java EE 6 SDK and the Glassfish Application Server. The students perform the lab exercises using the NetBeans (TM) Integrated Development Environment (IDE). This course is also an excellent method of preparing for the Oracle Certified Professional, Java Platform, Enterprise Edition 6 JavaServer Pages and Servlet Developer certification examination.

Students who can benefit from this course

- \* Java Developers creating web components (such as servlets and custom tags)
- \* Java Developers preparing for the Oracle Certified Professional, Java Platform, Enterprise Edition 6 JavaServer Pages and Servlet Developer examination

### Prerequisites

*Required Prerequisites*

Design Java technology applications

Functionally describe the benefits of an n-tier architecture

Integrate existing Java code (for example, reuse existing classes created by other team members)

Write Java technology applications, demonstrating significant programming ability

Write a web page using HTML

*Suggested Prerequisites*

Object-Oriented Analysis and Design Using UML (OO-226)

Java Programming Language, Java SE 6 (SL-275-SE6)

Developing Applications for the Java EE 6 Platform (FJ-310-EE6)

### Course Objectives

Write servlets using the Java programming language (Java servlets)

Create robust web applications using MVC architecture, session management, filters, and database integration

Write JSP pages

Create easy to maintain view components using JSP pages, the Expression Language, and elements of the JSP Standard

Create secure web applications using the features of the Java EE web container

## Course Topics

### Introduction to Java Servlets

- Describe web applications, CGI, and the role of Java
- Describe benefits of Java servlet technology
- Create a simple Java Servlet
- Define three-tier architecture
- Define Model-View-Controller (MVC) architecture

### Introduction to Java Server Pages

- Describe why Servlets are not the whole solution
- Describe essentials of JSPs
- Understand the fundamentals and reasons for MVC architecture

### Implementing an MVC Design

- Code a controller using a servlet
- Code a view using a JSP
- Forward control from a servlet to a JSP
- Understand fundamentals of EL
- Implement a simple MVC system

### The servlet's environment

- Understand more details of the HTTP protocol
- Understand fundamentals of HTML forms
- Understand fundamentals of the HttpServlet and related APIs
- Write code that manages client sessions and cookies

### Container facilities for servlets and JSPs

- Understand the purpose and structure of deployment descriptors
- Control context root and servlet mapping
- Create and use context and init parameters
- Use annotations to configure servlets

### More view facilities

- Understand the four data scopes
- Understand and use EL dot and array access operators with Java Beans, arrays, and collections
- Understand and use EL implicit objects
- Create and use arithmetic expressions in EL
- Identify the need for iteration and selection in the view, and use JSTL tags to address those needs

### Developing JSP pages

- Understand the origins, benefits, and weaknesses of JSPs
- Describe JSP technology, the conversion of JSPs to servlets, and the lifecycle of JSPs
- Understand JSP scripting elements, declarations and directives
- Use JSP implicit variables
- Understand and use jsp: tags

### Developing JSP pages using custom tags

- Relate the JSTL to common job roles in web application development and understand the use of tags in JSP development
- Recognize correct syntax for tags
- Configure a JSP to use tags from the JSTL
- Write JSP code using several standard tags

List capabilities of JSTL tags

### **More Controller facilities**

Understand the servlet lifecycle

Describe and use more advanced elements of the servlet APIs

Create filters and use them in web applications

### **More options for the Model**

Understand the roles of JDBC and JPA

Understand the many elements that make up the model

Understand fundamentals of connecting to a database using JDBC or JPA

### **Asynchronous web applications**

Understand the interactions that are essential to asynchronous web pages

Understand the role of AJAX-style client side programming

Implement asynchronous servlets using the facilities of Java EE 6

### **Web application security**

Understand the role of the container in security

Describe and implement four authentication models

Force the use of encryption between a web application and the client browser

Understand the role of JAAS in pluggable/extensible authentication for web applications
